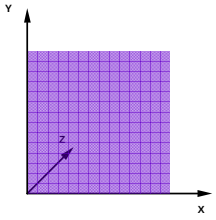
2. DEFINING OBJECTS: 3D REPRESENTATIONS

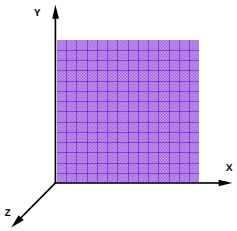
Coordinate systems
Surface representations
- Polygon tables

Volumetric representations - overview
- Constructive Solid Geometry
- Oct-trees

3-Dimensional coordinate systems



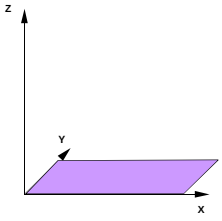
Cartesian left handed
Z axis goes "into" the page



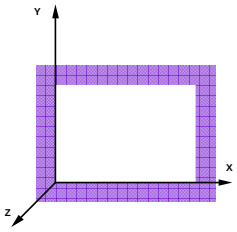
Cartesian right handed
Z axis goes "out" of the page

In this course we use **right-handed** coordinate system

Right-handed coordinate system layouts

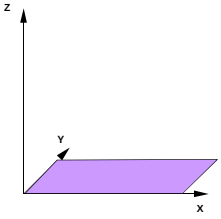


Z-up
Typically used in design

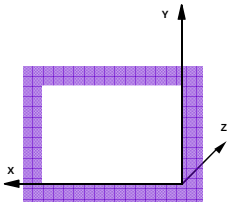


Y-up
Typically used in display / animation

Right-handed coordinate system layouts

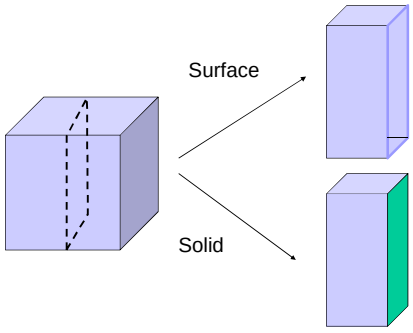


Z-up
Typically used in design



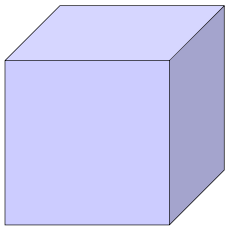
Y-up
Typically used in display / animation

Two classes of 3D representations

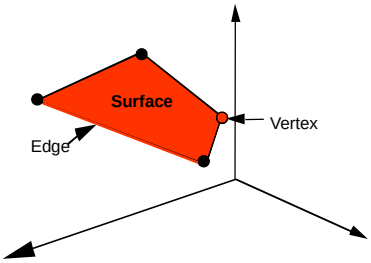


Surface representations

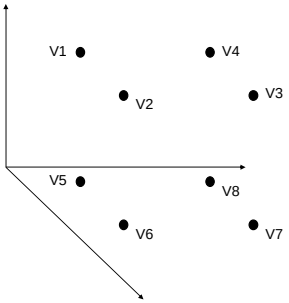
- Polygon surfaces



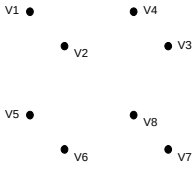
Surface representation

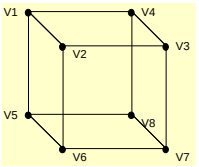


Vertices

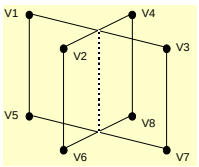


Wire-frame

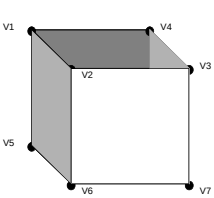


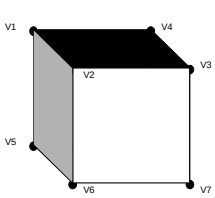


How many surfaces?



Surface





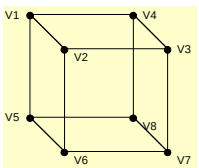
Surface (Boundary) representation

VERTEX TABLE

V1: x1 y1 z1
V2: x2 y2 z2
V3: x3 y3 z3
V4: x4 y4 z4
V5: x5 y5 z5
V6: x6 y6 z6
V7: x7 y7 z7
V8: x8 y8 z8

SURFACE TABLE

S1: V1 V2 V3 V4
S2: V5 V8 V7 V6
S3: V1 V5 V6 V2
S4: V2 V6 V7 V3
S5: V3 V7 V8 V4
S6: V1 V4 V8 V5



From vertices to surface patches

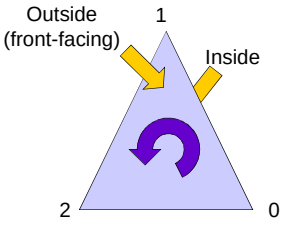
When constructing a surface patch,

does it matter

in what order we traverse the vertices?

YES

"In-s and Out-s" of triangles



Right-hand rule

Exercise

VERTEX TABLE

V1: x1 y1 z1
V2: x2 y2 z2
V3: x3 y3 z3
V4: x4 y4 z4
V5: x5 y5 z5
V6: x6 y6 z6
V7: x7 y7 z7
V8: x8 y8 z8

Consistency checking

- Every vertex is listed as an endpoint of at least two edges (lines)
- Every surface (polygon) is closed
- Each surface has at least one shared edge

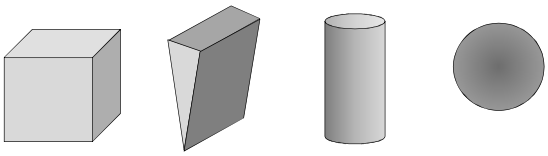
Representations for solids - overview

- Constructive Solid Geometry (CSG)
- Octrees

Volumetric Modules

Constructive Solid Geometry

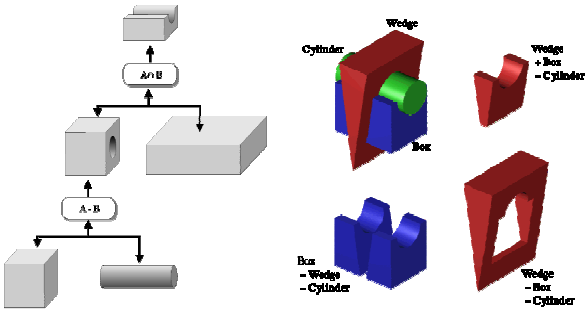
Primitives



Box Wedge Cylinder Sphere

Volumetric Modules

Constructive Solid Geometry



Constructive solid geometry

Key concepts for surface representation in Java

- PointArray
- LineArray
- TriangleArray
- QuadArray
- LineStripArray
- TriangleStripArray
- TriangleFanArray

- See http://java.sun.com/developer/onlineTraining/java3d/j3d_tutorial_ch2.pdf (especially from p. 2-25, 2.5.2 Subclasses of GeometryArray)

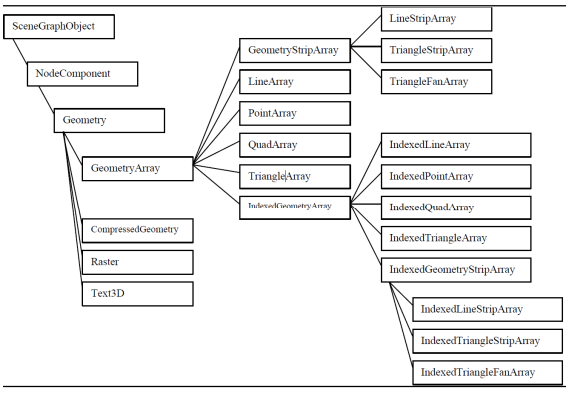

Figure 2-10 Geometry Class Hierarchy

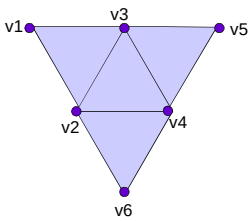
Homework

1. Define Surface Representation (i.e. Vertex Table and Surface Table) for a pyramid with triangular base. When specifying the Surface Table ensure that when the cut-out below is folded into the pyramid the triangle surfaces face correctly "in" and "out". Labels v1-v6 are vertex numbers, to be used in the construction of the Tables.



Homework

- Study matrix and vector operations. Tutorial is on-line at
  www.cs.bham.ac.uk/~exc/Teaching/Graphics/Mathematical_tools.pdf
- Do exercises in “Matrix and vector arithmetics”
  www.cs.bham.ac.uk/~exc/Teaching/Graphics/
- Solutions on-line on 26 January

Matlab exercise

- Define a simple cube, display and manipulate. The outline of the Matlab code is in file
  www.cs.bham.ac.uk/~exc/Teaching/Graphics/ex1_simple_cube.m

Reminder about Matlab tutorials

- http://www.cyclismo.org/tutorial/matlab/
  - Work through the tutorial should take you 2-3 hours.
- http://web.mit.edu/6.094/www/lecnotes/lec1.ppt
  - Ignore first five pages which have information relevant to the MIT course
- Matlab Help
  - Have a look at the “Programming” and “Graphics” sections
