

Digital image processing and analysis

7. Image enhancement: sharpening via manipulating image frequencies

Professor Ela Claridge
School of Computer Science

Previous lecture:

- Common types of image corruption
 - Noise
 - Blur
- Image frequencies
- Tools and methods for noise removal
 - Image profile
 - Image filtering operations
 - Convolution
 - Low-pass (smoothing) filters

In this lecture we shall find out about:

- Causes of image blur
- How human visual system sharpens images
- Digital filtering for image sharpening
 - Sharpening filters
 - High-pass filters
- Filtering in frequency domain

Image corruption

- An input digital image is never perfect, but is always “noisy” and distorted to some extent.

Image blur

Causes

- Common causes of blur
 - Poorly focused image
 - Camera motion (e.g. image taken from a moving car)
 - Light scatter (e.g. air, fog or smoke)
- Blur effect on image frequencies?

Image corruption

Noise and blur

(previous lecture)

Uncorrupted image

Image corrupted by noise

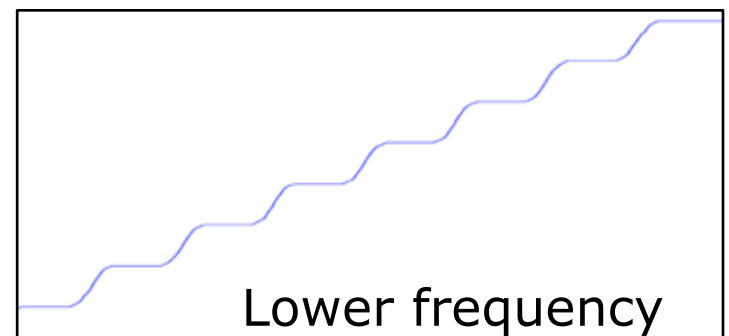

Image corrupted by blur

Image profiles

Higher frequency

Lower frequency

Image frequencies

Frequency decomposition

Image profiles

It is possible to decompose an image into its constituent frequency components.

Image

Its low frequency component

Its high frequency component

Image blur

Causes

- Common causes of blur
 - Poorly focused image
 - Camera motion (e.g. image taken from a moving car)
 - Light scatter (e.g. air, fog or smoke)
- Blur effect on image frequencies
 - Blurred images lack high frequency components
- **Are high frequencies just noise?**

Image frequencies

Frequency decomposition

Image profiles

Noisy image

Its high frequency component

Uncorrupted image

Its high frequency component

Image blur

Causes

- Common causes of blur
 - Poorly focused image
 - Camera motion (e.g. image taken from a moving car)
 - Light scatter (e.g. air, fog or smoke)
- Blur effect on image frequencies
 - Blurred images lack high frequency components
- Are high frequencies just noise?
 - **No, they also define edges, i.e. sharp transitions from one brightness / colour to another.**

Image blur

Causes

- Common causes of blur
 - Poorly focused image
 - Camera motion (e.g. image taken from a moving car)
 - Light scatter (e.g. fog or smoke)
- Blur effect on image frequencies
 - Blurred images lack high frequency components
- Blur reduction
 - Restore the missing high frequency components (HARD)
 - Over-emphasise high frequency components (EASY)

Frequency filtering operations

Tool for reducing frequency distortions

(previous lecture)

- Frequency filtering operations separate frequency components within an image into different frequency ranges, most often into:
 - Low frequency components
 - High frequency components
- Following this separation
 - Unwanted components can be rejected or,
 - Low and high frequency components can be processed separately and then re-combined.

Smoothing

Sharpening

Image frequencies

Image sharpening

Image profiles

Image with blur

Its high frequency component

Image + its high frequency component = sharper image

Image frequencies

Frequency decomposition

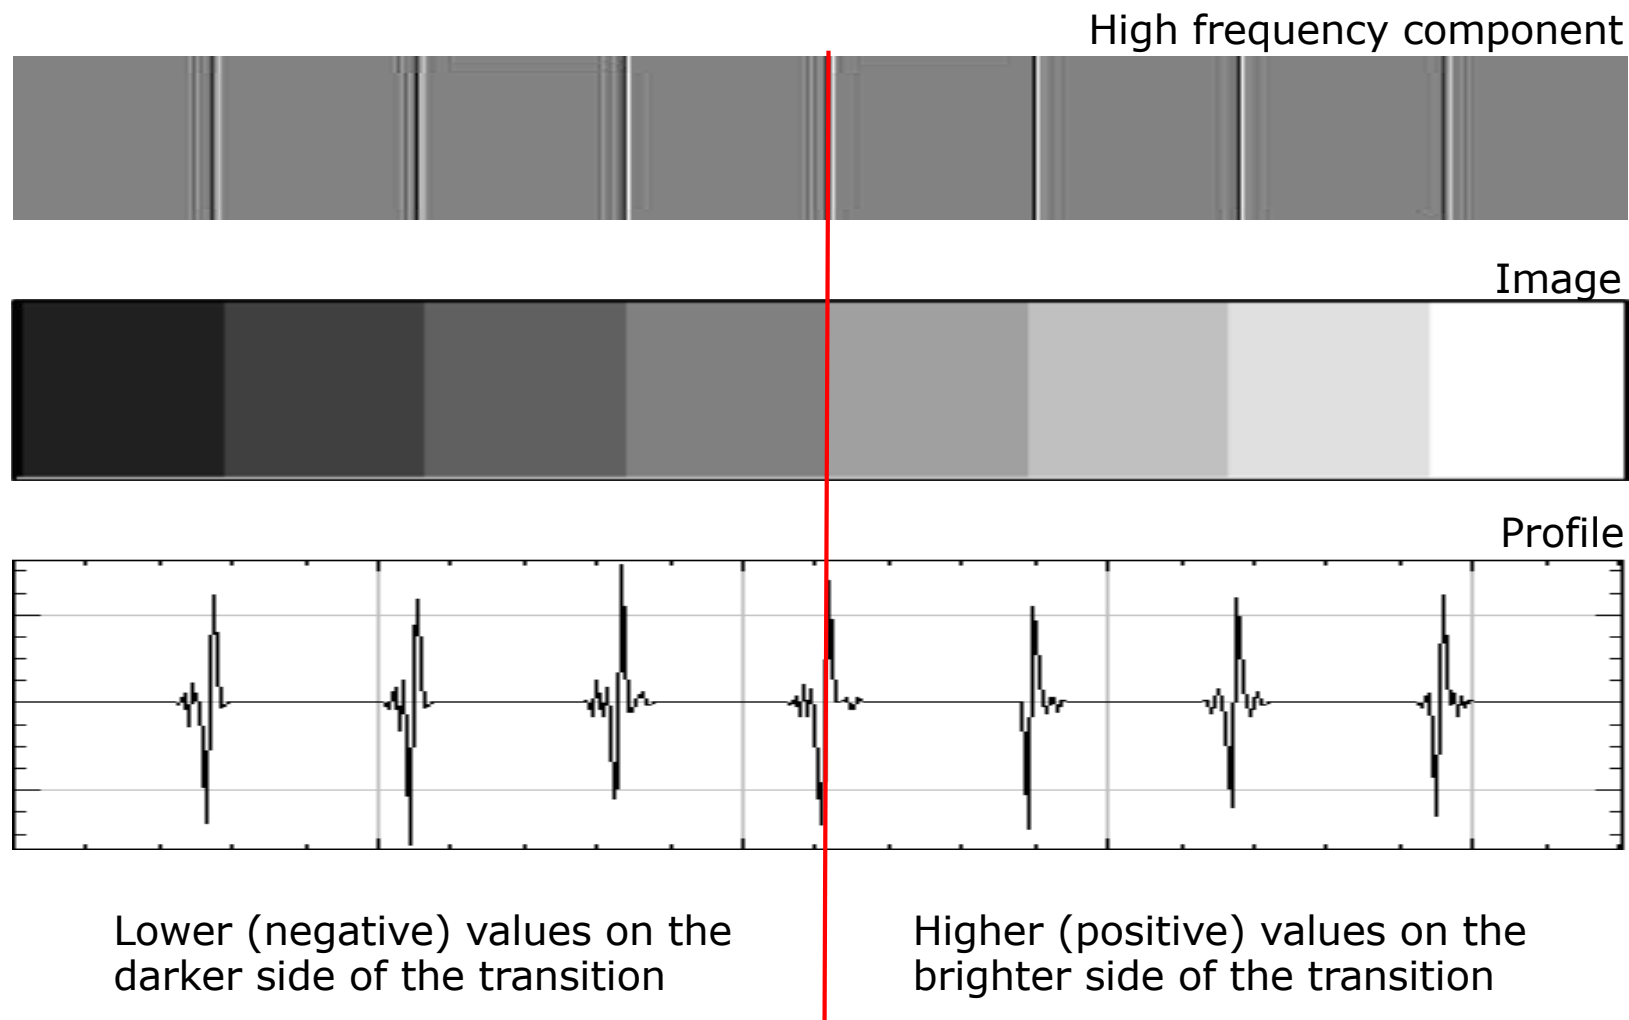

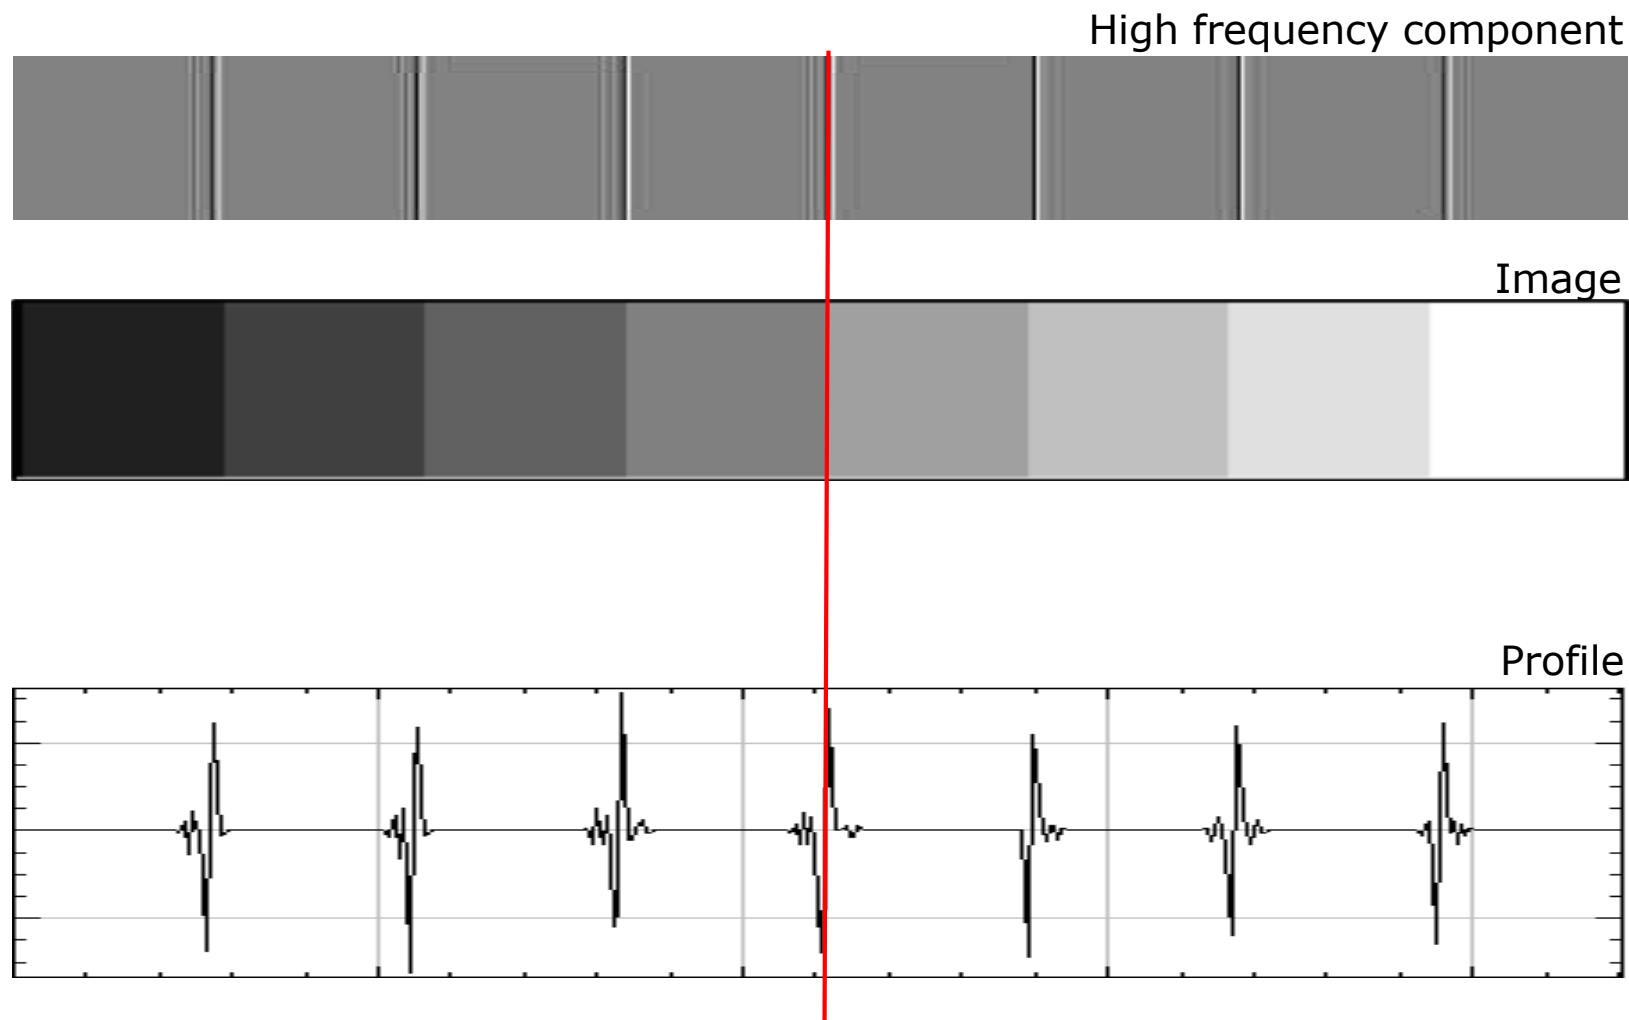

Image frequencies

Frequency decomposition

Lower (negative) values on the darker side of the transition

Higher (positive) values on the brighter side of the transition

Frequency filtering operations

Sharpening filters - concepts

Extract high frequency component and add the result to the original values

Image values
(3 pixels in a row)

Filter coefficients

Image values * filter
coefficients

Add the above (result is
high frequency component)

Add the above to the
original image value (result
is sharpened image)

50	50	100
-1	2	-1
-50	100	-100
	-50	
	0	

Pixel values change
from low to high
Filtered value
lower than original

50	100	100
-1	2	-1
-50	200	-100
	50	
	150	

Pixel values change
from high to low
Filtered value
higher than original

100	100	100
-1	2	-1
-100	200	-100
	0	
	100	

Pixel values
do not change
Filtered value
the same as original

Frequency filtering operations

Sharpening filters - concepts

Directly sharpen the image with a sharpening filter

Image values (3 pixels in a row)	50	50	100	50	100	100	100	100	100
Filter coefficients	-1	3	-1	-1	3	-1	-1	3	-1
Image values * filter coefficients	-50	150	-100	-50	300	-100	-100	300	-100
Add the above (result is sharpened image)		0			150			100	
Pixel values change from low to high Filtered value lower than original				Pixel values change from high to low Filtered value higher than original			Pixel values do not change Filtered value the same as original		

Frequency filtering operations

Sharpening filters in image processing

50	50	50	100	50
50	50	50	100	50
50	50	50	100	50
50	50	50	100	50
50	50	50	100	50

0	-1	0
-1	5	-1
0	-1	0

	50	0	200	
	50	0	200	
	50	0	200	

$$\begin{aligned}
 &50*0 + 50*(-1) + 50*0 + \\
 &50*(-1) + 50*5 + 50*(-1) + \\
 &50*0 + 50*(-1) + 50*0 = \\
 &\underline{50}
 \end{aligned}$$

$$\begin{aligned}
 &50*0 + 50*(-1) + 100*0 + \\
 &50*(-1) + 50*5 + 100*(-1) + \\
 &50*0 + 50*(-1) + 100*0 = \\
 &0
 \end{aligned}$$

$$\begin{aligned}
 &50*0 + 50*(-1) + 50*0 + \\
 &50*(-1) + 50*5 + 50*(-1) + \\
 &50*0 + 50*(-1) + 50*0 = \\
 &200
 \end{aligned}$$

This is convolution with a sharpening filter

Frequency filtering operations

Sharpening filters in image processing

Results of convolution with

0	-1	0
-1	5	-1
0	-1	0

Frequency filtering operations

Sharpening filters in image processing

Results of convolution with

0	-1	0
-1	5	-1
0	-1	0

Frequency filtering operations

Sharpening filters in image processing

50	50	50	50	50
50	50	50	50	50
50	50	100	50	50
50	50	50	50	50
50	50	50	50	50

noise pixel

0	-1	0
-1	5	-1
0	-1	0

	50	0	50	
	0	300	0	
	50	0	50	

noise pixel

Beware: a sharpening filter will enhance noise
(increase high frequency components)!

Frequency filtering operations

Sharpening filters in image processing

- Sharpening filter emphasises high frequency components.

Examples of sharpening filters

0	-1	0
-1	5	-1
0	-1	0

0	0	-1	0	0
0	-1	-2	-1	0
-1	-2	17	-2	-1
0	-1	-2	-1	0
0	0	-1	0	0

Can you deduce the principles?

Frequency filtering operations

Sharpening filters in image processing

Can you deduce the principles?

k_1	k_2	k_3
k_4	k_5	k_6
k_7	k_8	k_9

Absolute value of the sum

$$k_1 + k_2 + \dots + k_9 = 1$$

$$k_{\text{centre}} > 0 \text{ and the remaining } k_i < 0$$

Frequency filtering operations

Sharpening filters in image processing

- The process of ***sharpening*** works by adding a high frequency component to the original image data. This emphasises high frequencies (edges, but also noise!) while retaining all the original image frequencies.
- Applications
 - **Visually** compensating for blur present in an image
- **Side effect:** increases noise

Effects of sharpening

Mach bands

Sharpening filters in nature

Perceived image = Image + high frequency component

Image profiles

Image

Its high frequency component

Perceived image =
Image + high frequency component

Frequency filtering operations

High-pass filters

Image profiles

Image

Its high frequency component

High frequency components correspond to spatial discontinuities in image values, i.e. **edges**.

High-pass filters are used as **edge detectors**.
(discussed in the next lecture).

Frequency filtering operations

High-pass filters

50	50	50	100	50
50	50	50	100	50
50	50	50	100	50
50	50	50	100	50
50	50	50	100	50

0	-1	0
-1	4	-1
0	-1	0

	0	-50	100	
	0	-50	100	
	0	-50	100	

$$\begin{aligned}
 &50*0 + 50*(-1) + 50*0 + \\
 &50*(-1) + 50*4 + 50*(-1) + \\
 &50*0 + 50*(-1) + 50*0 = \\
 &0
 \end{aligned}$$

$$\begin{aligned}
 &50*0 + 50*(-1) + 100*0 + \\
 &50*(-1) + 50*4 + 100*(-1) + \\
 &50*0 + 50*(-1) + 100*0 = \\
 &-50
 \end{aligned}$$

$$\begin{aligned}
 &50*0 + 50*(-1) + 50*0 + \\
 &50*(-1) + 50*4 + 50*(-1) + \\
 &50*0 + 50*(-1) + 50*0 = \\
 &100
 \end{aligned}$$

Frequency filtering operations

High-pass filters

Results of convolution with

0	-1	0
-1	4	-1
0	-1	0

0	1	0
1	-4	1
0	1	0

Frequency filtering operations

High-pass filters

Results of convolution with

0	-1	0
-1	4	-1
0	-1	0

0	1	0
1	-4	1
0	1	0

Observe the difference in filter response

Frequency filtering operations

High-pass filters

- High pass filter reduces or suppresses low-frequency components and emphasises high frequency components.

Examples of high pass filters

0	-1	0
-1	4	-1
0	-1	0

0	1	0
1	-4	1
0	1	0

0	0	1	0	0
0	1	2	1	0
1	2	-16	2	1
0	1	2	1	0
0	0	1	0	0

Can you deduce the principles?

Frequency filtering operations

High-pass filters

Can you deduce the principles?

k_1	k_2	k_3
k_4	k_5	k_6
k_7	k_8	k_9

$$k_1 + k_2 + \dots + k_9 = 0$$

$k_{\text{centre}} > 0$ and the remaining $k_i < 0$ (on-centre)

or

$k_{\text{centre}} < 0$ and the remaining $k_i > 0$ (off-centre)

Frequency filtering operations

High-pass filters

Can you deduce the principles?

k_1	k_2	k_3
k_4	k_5	k_6
k_7	k_8	k_9

Intuitive hints

- All pixels in the image region have the same value (no edge) - the result: zero
- Same image values = frequency 0 (lowest), so not passed
- Pixel values in the image region change rapidly (edge)
- High frequencies emphasised (weighted difference between the centre and the surround)

In this lecture we have covered:

- Causes of image blur
- Combining frequencies for image sharpening
- Digital filtering for image sharpening
 - Sharpening filters
 - High-pass filters
- How human visual system sharpens images

Next lecture:

- Edge detection filters
 - Their types
 - How and why they work
 - How they can be combined
 - Where they can be found in the brain
- Median, min and max filters
- Edge preserving smoothing
